Herbal Extracts

A Herbal Extract is a substance made by extracting a part of a herbal raw material, often by using a solvent such as methanol or water. The process of Herbal Extraction is usually designed to maximize a certain portion of the original chemical compounds found in the plant, many of which have a therapeutic action.

Phytochemicals

Phytochemicals are chemical compounds produced by plants, generally to help them thrive or thwart competitors, predators, or pathogens. Phytochemicals are non-nutritive plant chemicals that have protective or disease preventive properties.

Spray Dried

Spray Dried Powders generally refers to fruit and vegetable powders that have been converted into the powder form for longer shelf life by using Low Temperature Spray Drying Technique..

Nutraceuticals

A nutraceutical product may be defined as a substance, which has physiological benefit or provides protection against chronic disease. Nutraceuticals may be used to improve health, delay the aging process, prevent chronic diseases, increase life expectancy, or support the structure or function of the body.

Proteins

Proteins are large biomolecules, or macromolecules, consisting of one or more long chains of amino acid residues. Proteins are required for the structure, function, and regulation of the body's cells, tissues, and organs..
